The closest prior art to the present invention is Choi (U.S. Patent No. 5,566,111). Choi disclosed a method for programming a non-volatile memory having the steps of applying a positive voltage to the control gate, a negative voltage to the drain of the memory cell, and monitoring a current flowing between the drain and source. Choi failed to show or suggest the steps of establishing a correlation between floating gate injection current and semiconductor substrate material current, monitoring the value of the semiconductor substrate material current, and utilizing the monitored value of the semiconductor substrate material to provide a feedback correction signal to the voltage potential applied to the control gate electrode.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
